

AI and Video Analytics for Retail: Hazard Asset Management

Our innovative AI & Video analytics technology has a broad range of applications in hazard asset management. We can monitor restricted areas and trigger alerts for unauthorized access and suspicious behavior using i3's AI detection engine.

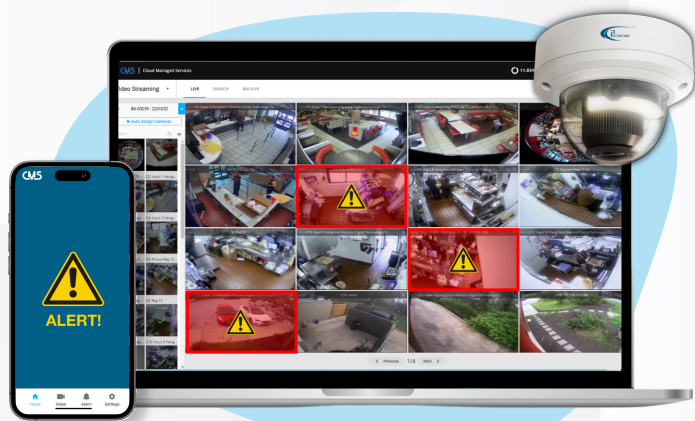

Authorization & Identification

- ✓ Facial Similarity.
- ✓ Vehicle License Plate Recognition.
- ✓ Object Behavior (such as dwell time, time of access, and other behavioral criteria).

Response and Deterrence

- ✓ Send real-time push alerts to relevant personnel, providing a live feed of non-compliant activity for immediate action.
- ✓ Trigger: LED lights based on unauthorized access alerts, and/or, pre-recorded audio warning messages, deterring individuals from committing non compliant behavior or actions.

Analysis and Action
